

IRIS Remote Service App Client

Enhancements and Additions from Version 2.0.10 to Version 2.0.12

Overview

This document details the changes that have been incorporated in a new release of Chiron's IRIS Remote Service App Client software.

Chiron's Remote Service App allows upload and download functionality over IP or GPRS between an alarm panel and a remote site using the alarm panel manufacturers standard software. This enables the possibility to connect via IP instead of PSTN with the remote site. The system does not require a fixed IP address at the alarm panel and is simple and straightforward without compromising security.

Changes in this Release

This new release of the IRIS Remote Service App Client now supports Windows 8 operating system. This is in addition to Windows XP, Windows Vista, Windows 7 and Windows Server 2008R2 already supported.

How to Download

The Remote Service Client is available for download from our website www.chironsc.com (http://www.chironsc.com/downloads_software.html).

Please Note: For 32-bit operating systems use the file IRIS Remote Service App x86 and for 64-bit operating systems use the file IRIS Remote Service App x64.
